

To Whom It May Concern:

Vanmar Constructors was awarded the UCFV student housing project after a competitive RFP process. Vanmar Constructors was responsible for the design, permits and approvals and the construction of the project.

Vanmar Constructors was retained on a Construction Management at Risk/Design Assist basis at the commencement of the project design. They were responsible for selecting a suitable design team and have managed the design development process by facilitating design coordination meetings, providing design and specification reviews on a continual basis, providing cost analysis and ensuring the final design was functional, cost effective and constructible. They led the design development of the project in an exemplary manner which has resulted in a facility that meets the functional requirements and cost parameters of the project.

The UCFV student housing facility is currently under construction and is approximately 85% complete and is proceeding on schedule. The quality of work and safety practices onsite has been outstanding. The project manager and the site superintendent managed the project very effectively and professionally and were a pleasure to work with.

We are very satisfied with the preconstruction services and construction services provided for the project to date and would not hesitate to highly recommend Vanmar Constructors for other projects of a similar nature.
